

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

SPECIAL RULES ADOPTED BY THE IOWA STATE BOARD OF HEALTH REGARDING INFANTILE PARALYSIS.

The Iowa state board of health adopted the following special rules regarding poliomyelitis at a meeting held August 17, 1910:

All cases of infantile paralysis, or suspected cases, shall be reported by the attending physician or the head of the family to the local board of health.

The state board of health recommends the quarantine of all cases for at least two weeks after the beginning of the disease and thorough disinfection of infected premises after the termination of the disease.

It is a well-established fact that the infectious material is found in the secretions of the nose and mouth of afflicted persons, and the board therefore recommends the use of sprays or gargles of 1 per cent solution of hydrogen peroxide to prevent the further spread of the disease. All discharges from the patient should be disinfected by means of bichloride of mercury or carbolic acid.
